SUMMARY

Recent Master's graduate in Cybersecurity and Information Assurance with passion and experience in penetration testing, threat analysis, digital forensics, and AI applications. Skilled in strategic planning and creative problem-solving with a strong foundation in technical communication and analysis.

Hands-on experience with:

- Operating Systems & Security Tools: Linux, Kali Linux, Windows, MacOS, Suricata IDS, Wireshark, Splunk, Nessus, Metasploit, Nmap, Burp Suite, Nikto
- Scripting & Automation: Python, Bash, PowerShell, SQL
- DevOps: Docker containerization, Infrastructure-as-Code concepts, system hardening, vulnerability analysis
- Frameworks/Concepts: GRC, SDLC integration, Secure Coding, Risk Frameworks

CERTIFICATIONS

• **CompTIA SecurityX** | **CompTIA PenTest+** | **CompTIA Cybersecurity Analyst (CySA+)** | **(ISC)² Certified in Cybersecurity (CC)**

EDUCATION

Western Governors University 2025

Master of Science, Cybersecurity and Information Assurance

DePaul University 2023

Bachelor of Science, Exercise Science

PROJECTS

- **Containerized Network IDS** | Deployed Suricata as an inline intrusion detection system on a Raspberry Pi using Docker, with containerized services for traffic inspection, rule management, and automated alerting. Tuned rulesets against live home network traffic and validated detection against simulated attack patterns.
- **Python OSINT Automation Toolkit** | Built a suite of Python tools for automated open-source intelligence gathering, including domain reconnaissance, email header analysis for phishing investigation, and breach data correlation. Used in practice to investigate a real CEO impersonation recruitment scam.
- **Full-Stack Market Intelligence Application** | Designed and built a React and Express.js web application that ingests live data from external APIs, processes it through an LLM analysis pipeline (Anthropic API), and surfaces actionable signals through a custom frontend. Demonstrates end-to-end ownership from API integration to UI, plus practical experience evaluating AI-generated outputs for reliability.
- **Endpoint Incident Response** | Investigated and remediated a live ClickFix social-engineering malware incident on a personal system using a structured IR workflow: triage with Windows Defender and Malwarebytes, persistence and process analysis via Sysinternals (Process Explorer, Autoruns), and post-incident hardening including outbound connection monitoring.
- **Capture the Flag and Bug Bounty** | Active participant in CTF competitions and public bug bounty programs. Hands-on experience across TCP/IP analysis, forensic file recovery, x86 reverse engineering (angr, custom Python emulators), and cryptographic analysis (XOR cipher exploitation).

EXPERIENCE

Customer Experience Consultant *August 2024 – December 2024*

CarMax | Remote

- Served as primary point of contact for inbound customers across phone and digital channels, assessing vehicle needs, presenting financing and purchase options, and guiding customers through the full transaction process.
- Mentored teammates on handling escalated and complex interactions while consistently meeting sales targets.

Leasing Consultant *July 2023 – July 2024*

Apartment Management Consultants | Denver, CO

- Managed leasing operations including prospect outreach, tours, application processing, and resident onboarding.
- Consistently achieved a 36% lead-to-lease conversion rate, more than 2.5x the regional average of 14%.
- Handled sensitive applicant data and financial information in accordance with company privacy and compliance standards.
