SUMMARY

Security analyst with hands-on experience in incident response, network intrusion detection, threat intelligence tooling, and vulnerability assessment. MS in Cybersecurity and Information Assurance; CompTIA SecurityX, CySA+, and PenTest+ certified. Built and operated a containerized Suricata IDS, led a live endpoint incident response investigation aligned with NIST SP 800-61, and developed Python OSINT automation used in a real phishing and impersonation investigation.

CERTIFICATIONS

CompTIA SecurityX | CompTIA CySA+ | CompTIA PenTest+ | ISC2 Certified in Cybersecurity (CC)
CISM (ISACA) - Exam expected October 2026

TECHNICAL SKILLS

- **Security Operations:** SIEM (Splunk), IDS/IPS (Suricata), EDR (Microsoft Defender), Wireshark, log analysis, threat detection, alert triage, incident response, phishing and email header analysis
- **Offensive Security & Vulnerability Management:** Nessus, Nmap, Metasploit, Burp Suite, Nikto, penetration testing, vulnerability scanning and remediation
- **Scripting & Automation:** Python, Bash, PowerShell, SQL
- **Platforms & Infrastructure:** Linux (Kali, Ubuntu), Windows, macOS, Docker, system hardening
- **Frameworks:** MITRE ATT&CK, NIST Cybersecurity Framework, NIST SP 800-61, GRC, secure SDLC, risk assessment

SECURITY PROJECTS & RESEARCH

- **Endpoint Incident Response (ClickFix Malware):** Investigated and remediated a live ClickFix social-engineering malware infection using an IR workflow aligned with NIST SP 800-61: triage with Microsoft Defender (EDR) and Malwarebytes, persistence and process analysis with Sysinternals (Process Explorer, Autoruns), PowerShell script block logging review (Event ID 4104), and mapping of observed behaviors to MITRE ATT&CK techniques. Published a full incident writeup on GitHub.
- **Containerized Network IDS:** Deployed Suricata as an inline intrusion detection system on a Raspberry Pi using Docker, with containerized services for traffic inspection, rule management, and automated alerting. Tuned rulesets against live network traffic to reduce false positives and validated detections against simulated attack patterns.
- **Python OSINT Automation Toolkit:** Built Python tools for automated open-source intelligence gathering: domain reconnaissance, email header analysis for phishing investigation, and breach data correlation. Applied in practice to investigate a real CEO impersonation recruitment scam.
- **Full-Stack Intelligence Analysis Application:** Designed and built a React and Express.js application that ingests live external API data, processes it through an LLM analysis pipeline (Anthropic API), and surfaces actionable signals in a custom frontend. Includes structured evaluation of AI-generated output for reliability.
- **CTF Competitions & Bug Bounty:** Active in CTF competitions and public bug bounty programs: TCP/IP and packet analysis, forensic file recovery, x86 reverse engineering (angr, custom Python emulators), and cryptographic analysis.

PROFESSIONAL EXPERIENCE

AI Model Evaluator (Freelance) | Handshake, Remote

Feb 2025 - Present

- Evaluate large language model outputs for accuracy, safety, and reliability across technical domains, applying structured rubrics and adversarial testing approaches.

Customer Experience Consultant | CarMax, Remote

Aug 2024 - Dec 2024

- Served as the primary point of contact for inbound customers across phone and digital channels, guiding complex transactions end to end while meeting sales targets and mentoring teammates on escalated interactions.

Leasing Consultant | Apartment Management Consultants, Denver, CO

Jul 2023 - Jul 2024

- Handled sensitive applicant PII and financial data in accordance with privacy and compliance standards; achieved a 36% lead-to-lease conversion rate, 2.5x the regional average.

EDUCATION

Master of Science, Cybersecurity and Information Assurance | Western Governors University

2025

Bachelor of Science, Exercise Science | DePaul University

2023
